

1.

Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

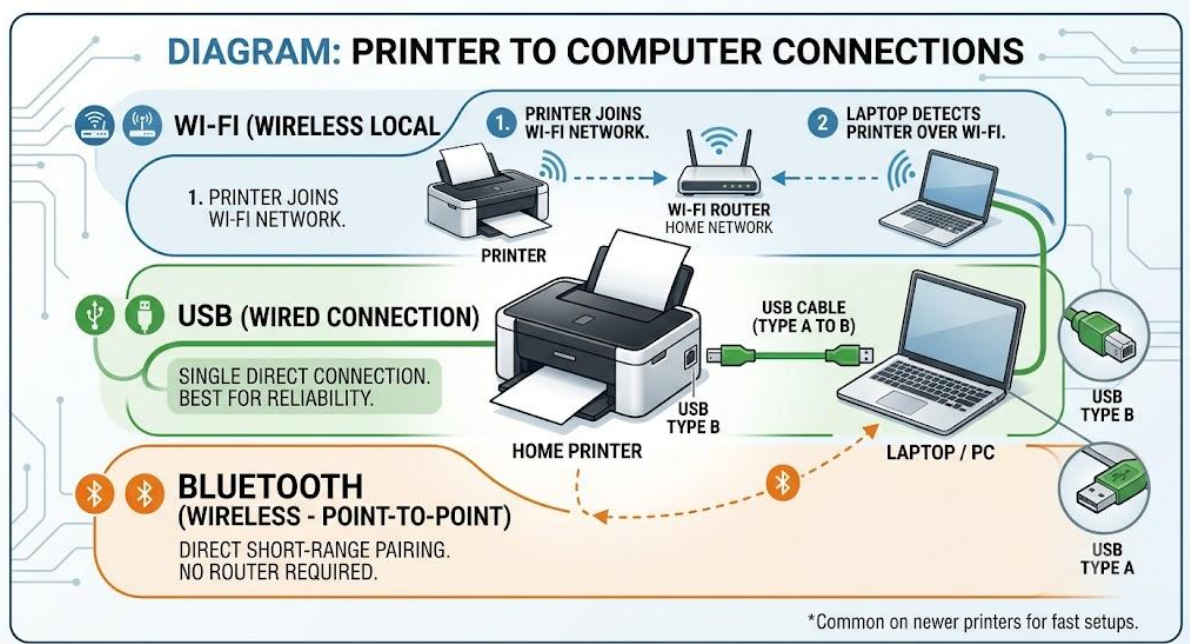

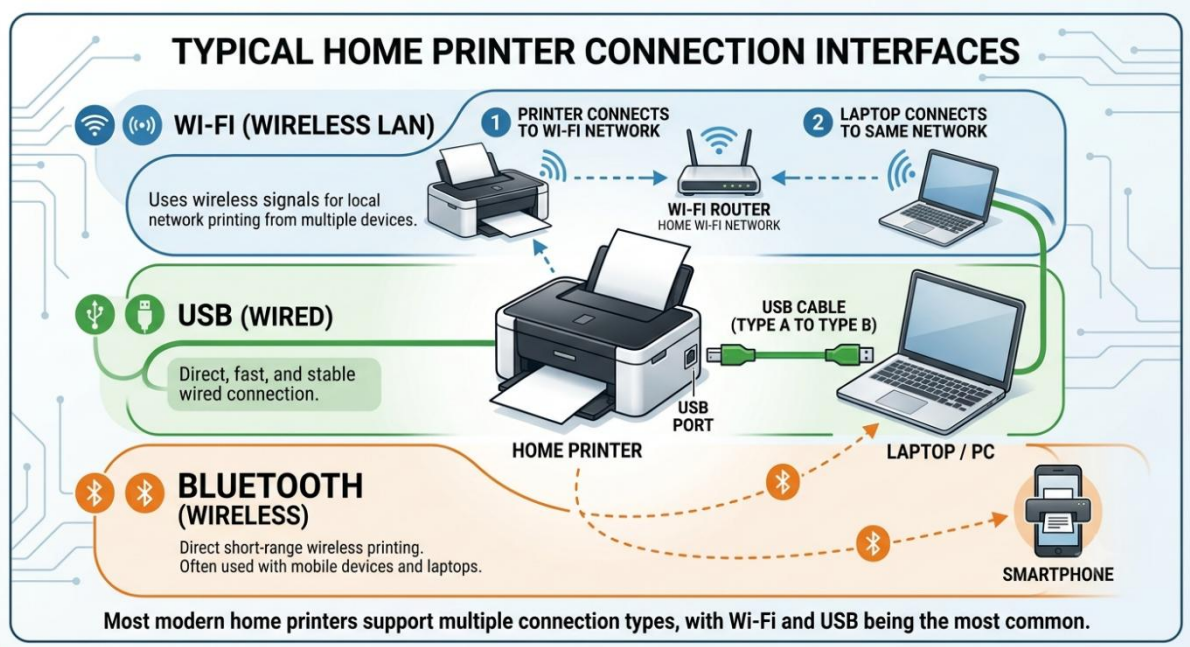

Printer	Inkjet Printer	Printing high-quality color photos and college assignments at home
Printer	Laser Printer	Fast, high-volume printing of multi-page text documents in an office
Printer	Thermal Printer	Instantly generating paper receipts at a supermarket checkout

Scanner	Flatbed Scanner	Digitizing single-page documents, photos, or book pages
Scanner	Document Scanner (ADF)	Rapidly batch-scanning stacks of office invoices and contracts

Webcam	Integrated/Built-in Webcam	Attending daily virtual team standups and informal calls on a laptop
Webcam	Standalone HD/4K Webcam	Streaming live video on platforms like Twitch or hosting webinars

2.

Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

3.

List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

1. USB Cable (Wired)

- **Advantage:** Fast and super reliable. Plug it in and it works instantly without disconnecting.
- **Disadvantage:** You are stuck with wires, so the device has to sit right next to your computer.

2. Wi-Fi (Wireless)

- **Advantage:** Very convenient. Anyone in the house can print or send files from their phone or laptop without plugging anything in.
- **Disadvantage:** If your home internet goes down or the signal is weak, the device stops working.

3. Bluetooth (Short-Range Wireless)

- **Advantage:** Connects directly from one device to another without needing a Wi-Fi router.
- **Disadvantage:** Works only when devices are close together and transfers data much slower than USB or Wi-Fi.

4.

Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

Step 1: Connect the Printer to Wi-Fi

1. Look at the screen on your printer.
2. Go to **Settings** → **Wi-Fi Setup**.
3. Pick your home Wi-Fi name and type in your password.
4. The Wi-Fi light on the printer will stay solid blue when connected.

Step 2: Connect Your Laptop to the Same Wi-Fi

- Make sure your laptop is connected to the **exact same Wi-Fi** as the printer.

Step 3: Add the Printer to Your Laptop

- **On a Windows Laptop:**
 1. Go to **Settings** → **Bluetooth & devices** → **Printers & scanners**.
 2. Click **Add device**.
 3. Click on your printer's name when it shows up.
- **On a Mac Laptop:**
 1. Go to **System Settings** → **Printers & Scanners**.
 2. Click **Add Printer, Scanner, or Fax**.
 3. Click on your printer's name and press **Add**.

Step 4: Print a Test Page

1. Open any document or picture on your laptop.
2. Press Ctrl + P (or Cmd + P on a Mac).
3. Click **Print** to test if it works.
